Portable Diffuser Unit	87701	24.95
Diffuser Refill Bead Cartridge (Box of 6)	88702	18.95

BUGBAND® WRISTBANDS: ASSORTED COLORS

- The vapors from the plastic BugBand wristband form a protective shield around the immediate area, keeping insects a safe distance away.
- While many repellents are easily diluted or rinsed off with swimming or perspiration, the wristband just keeps working, up to 120 hours. It's packaged in an innovative reusable plastic "pod" which can be used to store the wristband and can be sealed between uses to preserve the active life of the product.
- The plastic band is designed with a patented break-away strap that snaps if it becomes entangled.
- It can also be worn on belt loops, hatbands, pet collars, fastened in tents, attached to baby carriages or applied to other areas where insects could be a problem.
- Several wristbands can be strung together to create a longer band.

BUGBAND® 6 OZ. PUMP SPRAY BOTTLE

Perfect for when you need more heavy-duty protection, BugBand spray lotion does not contain any propellants, but relies on a highly effective metered pump sprayer to dispense a fine mist over the area to be treated. By spraying the BugBand liquid directly on clothing or skin, the Geraniol vapors form a protective barrier to deter blood-sucking insects from biting. It is ideal for uses around the ankles, wrist or neck, where insects tend to invade clothing. Use once for hours of insect protection.

What is Geraniol?

Savvy folks have been planting geraniums in their window boxes for centuries, using the natural properties of the flowers to repel bugs. Today, the hard data exists that proves that the use of geraniums is more than a tradition passed down from generation to generation. Geraniol, a powerful ingredient extracted from geranium oil through a unique refining process, does indeed provide a natural – and extremely effective – insect repellent.

According to laboratory and field studies by the University of Florida in Gainesville, Geraniol, the active ingredient in BugBand insect repellent, has been proven effective in repelling a wide variety of insects, including mosquitoes, house flies, stable flies, horn flies, cockroaches, fire ants, fleas, gnats, dog ticks, lone star ticks, and no-see-ums.

The University of Florida developed and tested alternatives to synthetic pesticides over a 17-year period. As part of the testing process, which was headed by Dr. Jerry Butler in the Department of Entomology and Nematology, university researchers created and patented a device called an olfactometer, which duplicates human skin and gaseous conditions that attract biting and annoying insects.

Previous to the University's work, there was no hard data or scientific studies to document what effect, if any, geranium oil had on any specific type of insect. The team tested and retested more than 4,000 compounds, and Geraniol emerged as an effective means of repelling insects.

The everyday geranium plants we grow in our gardens and flowerpots contain geranium oil, although only at low levels. Geranium plants earmarked for commercial oil production have been bred and refined over the years, and are currently grown in Nepal and other Southeast Asian countries.

BUGBAND® PORTABLE DIFFUSER

The BugBand motorized Portable Diffuser contains a replaceable cartridge of high concentrate Geraniol and a battery-operated fan. Geraniol vapors are released to form a protective vapor barrier in a given area. Small yet powerful Geraniol insect repellent protection!

Applications:

- Single replaceable cartridge will repel insects for up to 120 hours
- Repellent produces a pleasant natural fragrance
- Effective coverage area: 200-300 Square Feet
- Battery operated - 3 AA batteries not included)
- Place the bags on screened porches, patios and other outdoor enclosures.
- Can be used indoor or outdoor
